Every year Acer Gardens improves and extends its rose selections, using both Own Root and Budded varieties. We are growing many different varieties for 2020, featuring plants that are disease resistant and completely hardy in the Connecticut landscape. These roses have been carefully chosen to give you season-long enjoyment with a minimum of effort.

All roses need at least 6+ hours of sun during the growing season and a rich, loamy, well-drained soil. Apply slow release or organic fertilizers once or twice during the growing season and water deeply once a week. Roses do not like to have wet leaves so good soil watering techniques will help minimize any possible problems. Mulching will help the rose roots stay cool. Like all plants, roses respond to a little extra attention and will reward you many times over if you meet their basic needs.

Here is a listing of our current rose offerings with details of the various rose types:

Climbing Roses

Arborose ‘Florentina’	Z. 5-9	Bears clusters of bright red flowers on glossy, disease-resistant foliage. Suitable for trellis, fence or arbor. Compact, excellent climber 7’ tall by 3’ wide.
-----------------------	--------	---
